# PCD1.M2xx0 FW 1.16.69 Release Notes

### 1 Summary of Firmware versions

This summary presents a short description of all firmware versions which are set on PCD1.M2xx0 at the production (official versions and exceptionally some intermediate versions \$).

## 2 Important:

Update to this FW from a version ≤ 1.14.xx deletes the RAM DB/Text, the medias and the onboard file system (INTFLASH) is formatted, all data on this partition (file system, backup program & DB's) are deleted. The program is not lost!

To use the PCD1.M2xx0 a PG5 \$2.0.125 or newer is required.

Delete the SRAM & internal file system on Power-On with push button: After a power-on hold the push button during system start until the run/halt LED is flashing red (4Hz). If the button is released in this section the SRAM will be deleted and the system starts like no battery and empty SuperCAP. If the push button holds longer until the run/halt LED is flashing alternate the SRAM will be deleted and the internal file system is format.

#### Features or restrictions specifications 3

#### 3.1 General

- Needed Programming Tool Not usable with PG3 & PG4 To program a PCD3.M+xx0 a PG5 V \$2.0.124 or newer has to be used.
- FBox library The Fbox of the analogue modules W1, W2 & W5 only working from PG5 V \$1.3.010 or newer.
- FW update The FW can be updated with the FWdnld.exe program located in the PG5 directory.
- CPLD programming: There is no CPLD programming.
- The user program is stored in the internal SD-Card memory.
- The Configuration is stored in the internal SD-Card memory.
- The external Program backup is only possible to a File system device.
- New Configuration with PG5 2.0 SPI for:

1.14.00

1.16.22

1.16.42

- o FTP /File system
- New web-server / HTTP direct
- TCPIP/ enhancements:
  - DHCP/DNS
  - SNTP
  - PPP
  - **SNMP** -
- o Bluetooth
- Program Backup as backup File
  - backup file ".SBAK" 1.16.22 -Configuration Backup to backup File (only for ".SBAK" file) 1.16.22 1.16.22
  - Media Backup to backup File (only for ".SBAK" file)
- Clear Mapped Media

#### 3.2 Not implemented features on PCD1.M2xx0

- Mode MM4
- LAN2:
- Mode D
  - S-Bus-RIO as master.
- PROFIBUS FMS
- LON
- Program backup to PCD7.R500

#### 3.3 Memory

User memory:

System	HW	User memory		Onboard File
	Revision	Code/Text	DB	System
		(ROM)	(RAM)	
M2120	-	512 kbytes	128 kbytes	8 Mbytes

Note: At first memory configuration the FW makes an allocation with the maximum space available depending on the RAM/EPROM/FLASH chip.

**EEPROM**: •

-

- 1.14.00 The S-Bus configuration is automatically saved in the EEPROM, this means that even if the battery or super cap becomes discharged the S-Bus configuration will be safe. There are 50 non-volatile user registers.
- -
- Registers:

	- Up to 16383 Registers	1.14.00
•	Flags:	
•	- Up to 14336 Flags	1.14.02
•	DB backup (SYSWR 3xxx):	

- Fix size for onboard flash 256kB 1.16.24

1.14.00

#### 3.4 Instructions

Please refer to the following list which indicates the first firmware version used in production supporting the relevant feature.

in production supporting the relevant reature.	
<ul> <li>SYSWR 900x or SYSWR 300x</li> </ul>	1.14.00
Peripheral instructions	1.14.00
PB, FB Temporary Data	1.14.00

#### 3.6 Miscellaneous

• IL code of analogue modules W1, W2 & W5 must change (see manual).1.14.00

1.14.00

- New features for PG5. - New OUTL and OUTLX instructions
  - New synchronization for a bloc downloads in mode "RUN"
  - Possibility to upload data (SEDIT and SFUP) in a synchronized manner.
- XOB
